

THE DISCOVERY PROGRAM

Information and Fees

The **Discovery Program** at The King's Academy, a member of the National Institute of Learning Development, Norfolk, VA, is a program of preventive, corrective, and supportive intervention for students who struggle to learn.

- **Preventive:** Search & Teach scans all children in kindergarten and first grade to identify those who need extra work in perceptual skills (auditory, visual, motor) to become skilled readers. The emphasis is on strengthening pre-requisite skills before failure occurs.
- **Corrective:** Educational Therapy is offered to those who have been diagnosed with a learning disability. Intervention is aimed at stimulating deficit cognitive and perceptual skill areas and developing students who are able to be independent learners.
- **Supportive:** Remedial Instruction is offered through tutors who are trained to assist students to be successful with classroom content while the educational therapy process is taking place. Tutorial Study Hall is available for those who need help with the organizational and study skill aspects of their school endeavors. Individualized Courses are offered to those requiring major modifications to class curriculum.
